Subject: Human Health Criteria Risk Levels and FCR Rates for States

Hi Luis,

As you may know, Washington State is currently working through a rulemaking to adopt new human health criteria.

As the Water Quality Standards Coordinator, I am providing support information to our lead technical staff on this issue. One task is to compile, as best as possible, a comprehensive list of existing human health criteria risk levels and FCR rates used by the different states. Short of trolling each state's WQ web page, do you know if there is a comprehensive list of this information? I searched the main EPA site and didn't see anything, but I may not have looked in the right places.

Thanks, in advance, for any information you might provide!

Sincerely,

Becca Conklin
